WORD OPEN HEAD

Head fairy, group Ask for send word have a cold Thank you next Teacher Trinh Cong Nhut end love support I will assist and closely monitor the team's progress throughout the completion of this project.

The global economy is entering a knowledge-based era. Therefore, improving the effectiveness and quality of education and training will be a vital factor determining the survival and development of each nation and individual. Furthermore, Information Technology plays a crucial role in the development of society and is also an important factor, bridging the gap for exchange between different sectors of society and globally.

Therefore, online fast food delivery systems are a place where suppliers and consumers can buy, sell, and share information about fast food. Online fast food delivery systems are a method of buying and selling transactions for suppliers and consumers, conducted through an internet-connected system.

Background block This give house permission bow grant Have body post dish eat, create menu, create The promotional program allows users to order food, pay online, rate, and comment, while also enabling administrators to manage the quality and quantity of food, users, and suppliers based on that information.

Outside go out still Have function power system list to management reason dish eat, management reason People use.

Give permission People use Have body buy row above background slab: website .

In particular, the system also has a function for shippers to use. This helps increase effect fruit in job deliver row, help shipper easy easy according to follow single row and Delivery location.

1. PROJECT INTRODUCTION

1.1. Item destination

In today's digital age, the use of information technology in management and business has become indispensable. Online fast food delivery systems are built with the aim of helping users easily order food from restaurants and eateries in their area quickly and conveniently through websites and mobile applications.

For sellers, this system helps them reach a large number of potential customers without spending a lot on advertising or marketing. They can easily manage menus, orders, and deliveries efficiently through an intuitive and user-friendly management interface.

For buyers, this system makes it easy for them to search, compare, and put dish eat from the restaurant, restaurant eat Surname Love like one quick way quick and convenient They can benefit right at home. They can also rate and comment on the quality of service and food. This helps the user community have more information to make informed choices.

1.2. Scope

This online fast food delivery management system runs on web and Android platforms. It allows users to register and participate in ordering food from restaurants and eateries for free, based on listings provided by suppliers, with the aim of sharing food. The system serves five main user groups:

- **Guest**
- **Manager treatment pill**
- **Owner door row**
- **People use**
- **People delivery**

The website allows restaurant owners to register and upload dishes to the system, manage their menu, and track orders from users. Users have access to a reliable and useful source of information, creating a positive environment for businesses. Friend want eating and ordering The delivery person uses a mobile app. action to receive and delivery. The administrator manages the entire system and ensures stable operation.

2. FERTILIZER PROFIT AND DESIGN PLAN SYSTEM SOCIAL

2.1. Author core

The diagram below illustrates all the actors in a fast-food delivery system. An actor represents a Role; currently we have Manager, Shop Owner, and Employee. use and the Dealer row. Each agent has its own characteristics. individual operations When accessing the system, exercise your rights and privileges.

Author core	Tissue describe
Guest	Guest To be those People history use system system to Search for shops and food: - Find sword door row and dish . - Post sign account
Manager treatment pill	Administrators are responsible for controlling and managing accounts. rights chase update, and active dynamic above system statistics: - Manager reason and check check rights chase access belong to People use, owner door row and People deliver row. - According to follow and tell guarantee active dynamic smooth shall belong to system . - Support support and du maintain system system after When development declare
Owner door row	Owner door row To be those People management reason or team owning a business in the food or fast food delivery sector: - More, fix change and delete information believe door row, Menu and prices. - Process reason and management reason the single put row from People use. - See fight price and reflect back from People use.
	Users are those who use the system to search for restaurants and food, place orders, and make payments: Search for restaurants and dishes based on location,

People use	category, price, and reviews. - Put row and select direction awake bar maths. - According to follow status Thai single row.
People deliver row	Delivery personnel are involved in the transportation process. and deliver row from door row arrive People consumption : - Receive and management reason single put row to perform deliver row. - Bow grant pandemic delivery row.

Board 1 : The agent

2.2. Chart singing history use of the system system

2.5. Chart thing week on one's own

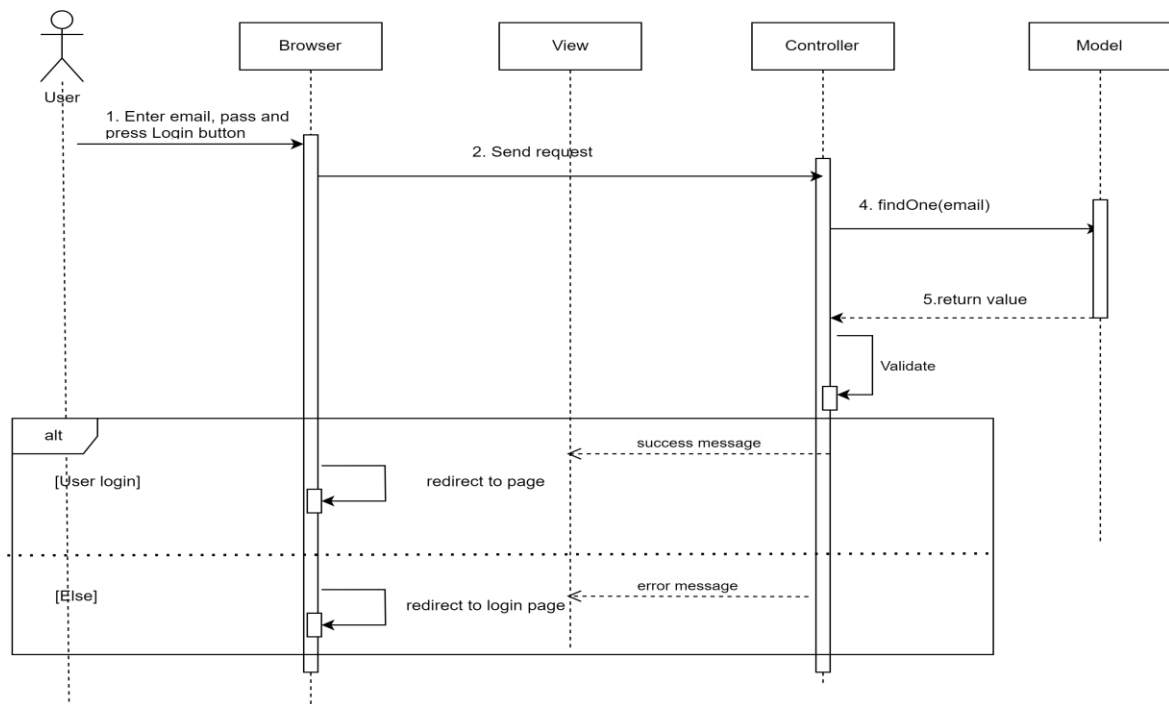

Image 9: Chart thing week on one's own post import

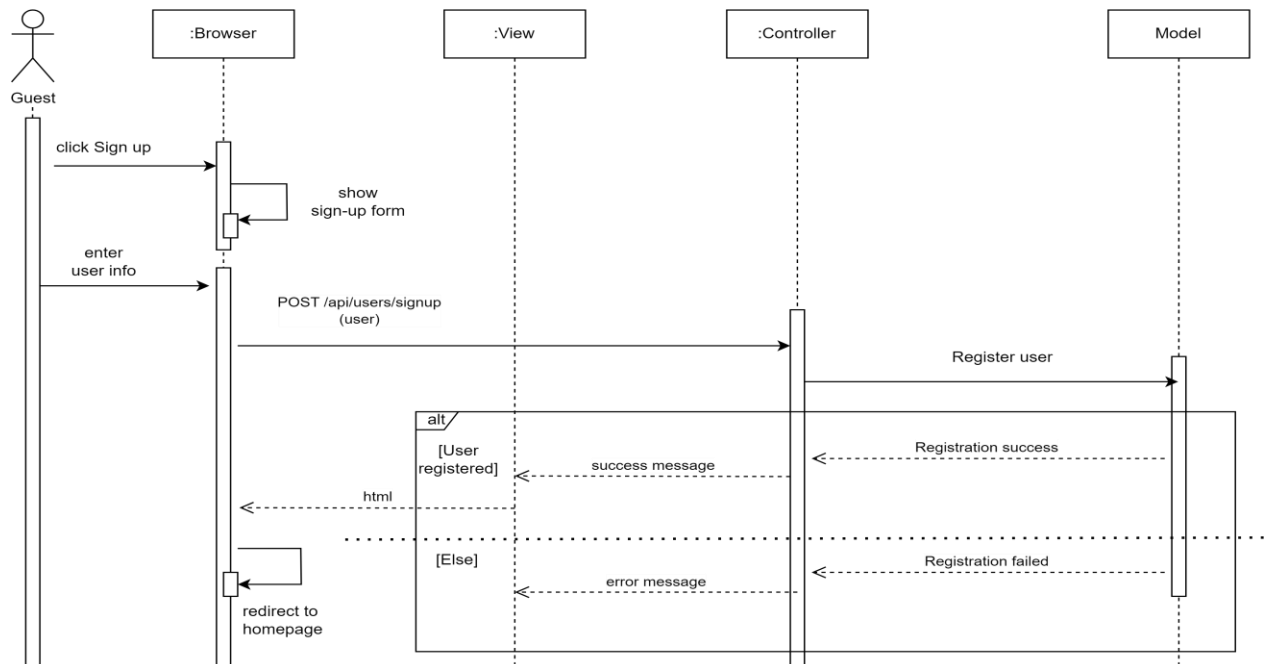

Image 10: Chart thing week on one's own post sign

2.6. System architecture

The project's architecture is built on a multi-tier architecture model, specifically the Model-View-Controller (MVC) model, running on Microsoft's .NET Framework.

2.6.1. Presentation Tier (Front-End)

This layer is responsible for displaying the user interface (UI) and handling basic user interactions.

- Main technology: ASP.NET MVC (Razor) , HTML5 , CSS (Bootstrap) , and JavaScript/jQuery .
- Operating model: Uses Server-Side Rendering (SSR) architecture . The user interface (HTML) is generated entirely on the server side using the Razor Engine before being sent to the client browser.
- Interaction handling:
 - jQuery/AJAX: Strategically used to handle asynchronous tasks (such as calculating shipping costs, updating the shopping cart, viewing shipper information via Modal). This minimizes the number of full page reloads, creating a smoother user experience without needing to switch to a complex SPA architecture.
 - Bootstrap: Provides a responsive interface and standardizes UI elements.

2.6.2. Application/Business Logic Tier (Controller)

This layer contains business logic and acts as an intermediary between the user interface and the data.

- Main technology: C# in Controller classes .
- Main functions:
 - Routing: Receives HTTP requests from users and identifies the corresponding Controller/Action.

- Business logic processing: Contains complex calculation functions such as `TinhPhiShipMoi` (calculates shipping fee), `TinhPhiDichVu` (calculates service fee), and user authentication logic (`KiemTraDangNhap`).
- Geocoding and Routing: Use helper functions (`ValidateAddressRealtime` , `GetRouteDataORS`) to interact with external map service APIs, calculating coordinates (Lat/Lng) and the actual distance between the restaurant and the customer.

2.6.3. Data Access Tier (Model)

This layer is responsible for connecting to, querying, and managing data within the database.

- Main technology: Entity Framework (Code First/Database First) .
- Main functions:
 - Object Mapping (ORM): Entity Framework maps C# objects (Model classes) to tables in SQL Server (e.g., `DonHang` , `KhachHang` , `Shipper`).
 - LINQ Queries: Use LINQ (Language Integrated Query) to query and update data securely and efficiently.
 - (Example: `db.DonHangs.Include(...).Where(...)`).

2.7. API Communication Technology

The project uses a Resource-Oriented API style via JSON .

- Using JSON: All data returned for asynchronous (AJAX) requests is in JSON format, processed by the `JsonResult` class in C#. This ensures fast data transmission performance and easy handling using JavaScript on the client side.
- RESTful style: Although not a pure Web API service, Actions like `[HttpGet]GetTrackingInfo` or `[HttpPost]SaveShipperReview` adhere to basic REST principles:
 - Separation: Specialized controllers handle different types of requests (Client, Restaurant, Shipper).
 - Communication: Use standard HTTP methods (GET for retrieving data, POST for creating/updating data) to communicate data.

3. MANAGEMENT LY ATTEND JUDGMENT

3.1. Tissue image SCRUM

This online fast food delivery management system runs on web and Android platforms and uses the Scrum model for project management. It allows users to register and participate in ordering food from restaurants and eateries for free, based on listings provided by suppliers, with the aim of sharing food experiences.

The system serves four main user groups: Administrators, Shop Owners, Users, and Delivery Drivers.

Scrum makes it easy to make changes to a project at any stage, understand customer needs, and continuously improve the system for better performance.

Three original reason barrel core belong to Scrum there That is:

- Transparency: Artifacts (creations or documents) must be transparent to stakeholders.
- Inspection: You need to regularly and consistently check the artifacts and the progress of the work.
- Adaptation: If a serious problem occurs, the process or artifacts must be adjusted.

All the work and values of Scrum are expressed through three artifacts (meaning...). Artifacts are things created to serve the Scrum model. Through these artifacts, you can maximize transparency as well as create opportunities for inspection and adaptation.

- Product Backlog: an organized and ever-evolving list of what needs to be improved for the product. Additionally, the product backlog includes the long-term product goals that the Scrum team needs to achieve.
- Sprint Backlog: includes the sprint goals, the product backlog items for the sprint, and how to create growth packages. In other words, it includes the necessary items along with the reasons and methods for achieving them.
- Increment: a compilation of completed product backlog items up to the current sprint. At the end of each sprint, increments are added. New and "completed" items will be added to this synthesizer.

5. CHECK TRY

5.1. Check try Put row direct line

- **Test Objective:** To ensure that the system operates as expected. how grant spread test put row direct line smooth but and answer application soft user demand.
- **Dramatic Copy Check Try:**
 1. Check search Find sword door row:
 - Tissue Description: Find sword door row

- Pepper heart Evaluate :
 - Possibility power find sword according to name item product product, according to taste mind and according to name.
 - Information believe total mandarin belong to door row presently market full enough.
- 2. Check search See information believe door row:
 - Tissue Description: After When find sword door row then will select enter see information believe door the goods as well as the food in the store
 - Pepper heart Evaluate :
 - Information believe door row full enough and spend section
 - Have body see name book fight price and receive consider
 - Name book dish eat show market full enough, Have stool divide according to name item.
 - Information believe total mandarin about dish eat: price money, name, ... show market full enough.
 - Thao author more enter basket should Okay real presently easy easy
- 3. Check search More enter basket row:
 - Tissue Description: More the dish eat from name book dish in door row enter basket row
 - Pepper heart Evaluate :
 - People use Have body increase or reduce number quantity belong to each dish in basket

row.

- System system will on one's own dynamic calculate total money When People use real presently replace Change the quantity or remove an item from the shopping cart.
- People use Have ability power more take note uncle give each dish in basket row.
- 4. Check search Put row:
 - Tissue Description: Select put single row live in basket row
 - Pepper heart Evaluate :

- System system calculate Okay time space and fee deliver row
- Have body see name book fight price and receive consider
- Name book dish eat show market full enough, Have stool divide according to name item.
- Information believe total mandarin about dish eat: price money, name, ... show market full enough.
- Thao author buy shopping should Okay real presently easy .

5. Check search Bar maths:

- Tissue Description: After When put single then advance onion bar maths single row
- Pepper heart Evaluate :
 - Thao author bar maths easy easy, deliver area direct mandarin.

5.2. Check try Manager reason talent clause People use

- **Test Objective:** This function relates to managing account information. belong to People use, bag including post sign, post import, access Japan information believe For personal use, change your password.

- **Dramatic Copy Check Try:**

1. Check search Register :

- Description: Registration is the process a user uses to create a new account on system system equal way bow grant information believe fish core to Okay post sign and Utilize the system's features.
- Pepper heart Evaluate :
 - Discard tell that information believe fish core like name, land only e-mail, and honey The data is transmitted and stored securely.
 - Body determine see socks chief the school information believe post sign even Okay fill full enough

and main corpse.

- Love bridge honey mouth strong and history use the measure France tell honey like code chemical
- Check search calculate fit tears and du best belong to land only e-mail.

- Send e-mail body receive post sign arrive land only e-mail but
People use Satisfied provide .

2. Check search Post input:

- Tissue Description: After When find sword door row then will select enter see information believe door the goods as well as the food in the store
- Pepper heart Evaluate :
 - Check search calculate tell honey belong to honey mouth equal way Love bridge honey mouth strong and use security measures such as encryption and password hiding.
 - Body determine see People use Have body post import equal way import correct land Just the registered email and password, or not.
 - Post import information via e-mail Satisfied post sign direct next Are not need honey mouth.
