1. Document Overview

This Product Backlog provides an actionable Agile delivery backlog derived from the validated requirements baseline for the Online Food Delivery System. It acts as a portfolio reconstruction demonstrating the transformation of structured requirements into actionable backlog items.

2. Product / System Context

The Online Food Delivery System facilitates food ordering and delivery fulfilment through interactions between Customers, Restaurants, Shippers, and Administrators.

3. Backlog Governance

Priority values are analytical portfolio prioritization for backlog representation and are not claimed as historical Product Owner decisions. Backlog status represents the portfolio reconstruction state and is not claimed to be the historical sprint status.

4. Product Goals

- - Enable Customers to discover products and place eligible orders.
- - Enable Restaurants to process and prepare orders.
- - Enable Shippers to execute eligible deliveries.
- - Provide controlled order lifecycle visibility.
- - Enforce critical distance, fee, assignment and review rules.
- - Provide Administrator governance over operational participants.

5. Stakeholders / Actors

- - Customer
- - Restaurant
- - Shipper
- - Administrator

6. Product Backlog Summary

Source-baseline metrics:

- - 22 User Stories
- - 27 Functional Requirements
- - 7 Business Rules
- - 50 Acceptance Criteria
- - 38 RTM Rows
- - 60 Validation Catalogue Entries

Backlog User Story rows: 22

Epic count: 8

7. Epic / Feature Structure

EPIC-01: Customer Account & Access

EPIC-02: Restaurant & Product Discovery

EPIC-03: Shopping Cart & Checkout

EPIC-04: Order Processing

EPIC-05: Shipper & Delivery Management

EPIC-06: Order Tracking & Completion

EPIC-07: Reviews & Post-Order Experience

EPIC-08: Administrator & Partner Governance

8. User Story Map

Analytical MVP view reconstructed for portfolio demonstration.

Discover → Select → Order → Fulfil → Deliver → Track → Complete → Review

Customer User Stories map primarily to Discover, Select, Order, Track, Review.

Restaurant User Stories map primarily to Fulfil.

Shipper User Stories map primarily to Deliver, Complete.

9. Detailed Product Backlog

10. Acceptance Criteria Summary

Full Acceptance Criteria are maintained in the source User Stories & Acceptance Criteria artefact. The backlog preserves the exact numbering and logic of the 50 approved Acceptance Criteria.

11. Business Rule Mapping

- BR-ORDER-01: Mapped to US-CUS-07
- BR-SHIP-01, BR-SHIP-02: Mapped to US-SHP-02
- BR-DEL-01, BR-FEE-01, BR-FEE-02: Mapped to US-CUS-04
- BR-PARTNER-01: Mapped to US-RES-04, US-SHP-01, US-SHP-02, US-SHP-03, US-ADM-02

12. Order Lifecycle Mapping

- ST-01 — Chờ xác nhận: Created via checkout (US-CUS-04)
- ST-02 — Đang lấy món: Triggered by Restaurant (US-RES-04)
- ST-03 — Đang giao: Triggered by Shipper pickup (US-SHP-03)
- ST-04 — Hoàn thành: Triggered by Shipper completion (US-SHP-03)

14. Clarifications / Open Questions

CL-01: Definition of "active delivery" for the single active delivery constraint.

CL-02: Fractional-kilometre rounding logic for distance-based fee calculation.

CL-03: Authoritative timestamp for the service fee rule.

CL-04: Wider non-core Partner capability boundary regarding Administrator approval.

CL-05: Exact post-Shipper-cancellation Order.Status transition.

CL-06: Exact Restaurant confirmation semantics between "Chờ xác nhận" and "Đang lấy món".

CL-07: Review cardinality and editability rules.

15. Dependencies

- - Administrator approval
- - Address / route-distance calculation
- - Order state transitions
- - Restaurant readiness
- - Shipper eligibility

16. Non-Functional Considerations

Technical / Delivery Considerations: System relies on approved NFRs documented in the SRS (NFR-COMP-01, NFR-PER-01, NFR-SEC-01, NFR-SEC-02). No technical tasks fabricated.

17. Out of Scope

- - Native mobile applications
- - Real production payment-gateway integration

18. Definition of Ready

Portfolio Agile Governance Baseline:

- - User / actor is identified
- - Desired capability is clear
- - Business value is understood
- - Acceptance criteria are available
- - Relevant business rules are identified
- - Dependencies are understood
- - Unresolved semantics are explicitly recorded

19. Definition of Done

Portfolio Governance Baseline:

- - Implementation completed
- - Acceptance criteria satisfied
- - Relevant business rules validated
- - Functional testing completed
- - UAT evidence available where applicable
- - RTM updated

20. Glossary

- PB ID: Product Backlog ID

- FR / UC / US / AC: Functional Requirement / Use Case / User Story / Acceptance Criteria

- Administrator / Customer / Restaurant / Shipper: Approved Actors

- COD / QR: Payment mechanisms
